                                                                                                                                                                                                                         The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; SW:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of the sanger Centre Chromosome 20 constructed by the Sanger Centre Chromosome 20 Mapping Group. Further information can be found at
                                           http://www.sanger.ac.uk/HGP/Chr20
This sequence is the entire insert of clone RP4-718J7 The true left end of clone RP5-1007E6 is at 71437 in this sequence. The true right end of clone RP4-579F20 is at 43945 in this sequence.
RP4-718J7 is from the library RPCI-4 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                      corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 During sequence assembly data is compared from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having CC cardiac cell anti-apoptotic activity and fragments of it provided CC MM_00438 and AQ177461. Also included are expression vectors, host CC cells, the MIVR-1 polypeptide. MIVR-1 binding peptides, modulators of with a candidate agent, where the molecule is a nucleic activity compression product, determining if the anti-apoptotic activity CC comprising MIVR-1, IEX-1, VDDP-1, BTG-2 and TIS-11d or its modulated and thereby identifying a modulator. The cardiac cell anti-cc apoptotic molecules and nucleic acids of the invention are useful for disorders as characterised by increased apoptotic cell-death of vascular cc andothelial cells e.g. cardiac hypertrophy, myocardial infarction, cc stroke, arteriosclerosis and heart failure. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C cellular adhesion. The proteins can be used to treat any von Willebrand C factor-associated disorder, regulate extracellular matrix structuring, CC cellular adhesion, and cell trafficking and/or migration, modulate CC cellular interactions, modulate cell adhesion in proliferative CC disorders, such as cancer, modulate the proliferation, differentiation, CC and/or function of cells that appear in the bone marrow, and leukocytes, CC treat bone marrow, blood and hematopoietic associated diseases and CC chronic bronchitis, bronchial asthma and bronchiectasis, intestinal CC disorders, atelectasis, pulmonary congestion or oedema, emphysema, CC chronic bronchitis, bronchial asthma and bronchiectasis, intestinal CC disorders, spleen associated diseases, modulate renal disorders, treat CC cardiovascular disorders such as ischemic heart disease, modulate the CC cells and to treat bone and/or cartilage associated diseases or CC disorder. They may also be used to treat disorders associated with the CC ovaries, cerebral oedema, hydrocephalus, brain herniations, iatrogenic CC disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer, as well as for
                                                                                                                                                                                                                                                                                                                                                                      24-JAN-2001;

AAA75163-65 encode human TANGO 261 proteins. The specification also CC describes TANGO 266, TANGO 267, TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The CC disorder, regulate extracellular matrix structuring, cellular adhesion, or modulate cell trafficking and/or migration, modulate cellular interactions, cc modulate tell adhesion in proliferative disorders, such as cancer, cc modulate the proliferation, differentiation, and/or function of cells cascolated diseases and leukocytes, treat bone marrow, and leukocytes, treat bone marrow, blood casthma and bronchiectasis, intestinal disorders, spleen associated cas ischemic heart diseases, modulate tenel diseases, modulate tenel diseases, modulate tenel diseases, modulate the proliferation, differentiation, differentiation, differentiation, chronic bronchitis, bronchial caschemic heart diseases, modulate the proliferation, differentiation, cromplysema, chronic bronchitis, bronchial caschemic heart diseases, modulate the proliferation, differentiation, cromplysema, chronic bronchitis, bronchial caschemic heart diseases, modulate the proliferation, differentiation, cromplysema, cascolated diseases, modulate the proliferation, differentiation, cromplysema, cascolated disease, and to treat bone and/or bydrocephalus, brain herniations, latrogenic disease, inflammations, cromplysema, brain the poweries, and cerebral complysema, brain cancers, constend the proliferation disease, multiple sclerosis, brain cancers, created using information provided.

CC AAA75163-65 encode human TANGO 261 proteins. The specification also CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate CC proteins can be used to treat any von Willebrand factor-associated CC disorder, regulate extracellular matrix structuring, cellular adhesion, CC and cell trafficking and/or migration, modulate cellular interactions, CC modulate cell adhesion in proliferative disorders, such as cancer, CC modulate the proliferation differentiation, and/or function of cells can describe that appear in the bone marrow, and leukocytes, treat bone marrow, blood CC and hematopoietic associated diseases and disorders, atelectasis, CC pulmonary congestion or oedema, emplysema, chronic bronchitis, bronchial casthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate the proliferation, differentiation, cas ischemic heart disease, modulate the proliferation, differentiation, cas ischemic heart diseases modulate the proliferation, differentiation, cartilage associated with the ovaries, and cerebral oedema, chydrocephalus, brain herniations, iatrogenic disease, inflammations, conscients associated with the ovaries, and cerebral oedema. Parking of the constrainty of the cartilage cells and to treat bone and/or cartilage associated with the ovaries, and cerebral oedema. Parking of disease, inflammations, conscients with the ovaries, and cerebral oedema. Parking of disease, inflammations, conscients with the ovaries, and cerebral oedema. Parking of disease, inflammations, conscients with the ovaries and cartilage cartilage carebral and cancers.

CC treating or preventing a disorder associated with decreased contracting or preventing a disorder associated with decreased contracting or preventing disorder associated with decreased expression or activity of NEUAP. Antagonists of NEUAP are useful for treating or preventing disorder associated with increased expression contractivity of NEUAP. NEUAP or their fragments or derivatives are conserved in the preventing disorder such as epilepsy, ischemic contracts of the cerebral disorder such as epilepsy, ischemic contracts of the cerebral neoplasms. Alzheimer's contract disease, pick's disease, huntington's disease, dementia and parkinson's disease. NEUAPs are also useful for treating other contracts of the cerebral neoplasms, alzheimer's contracts of the cerebral neoplasms, alzheimer's contracts of the central nervous system, cerebral contracts of the central nervous system, cerebral contracts of the central nervous system disorders, cerebral nervous system disorders, cerebral contracts of the central nervous system disorders, cerebral contracts of the central nervous system disorders, cerebral nervous system disorders, cerebral contracts of the central nervous system disorders, cerebral contracts of the central nervous system disorders, cerebral contracts of the central nervous system disorders, cerebral contracts of cancers undarkety and schizophrenic disorders, a cell contracts, peripheral nervous system disorders, cell contracts, cendocrine, and toxic myopathies, mental contracts, burstis, cirrhosis, hepatitis, mixed connective tissue disease (MCTD), myelofibrosis, bepatitis, mixed connective tissue disease (MCTD), myelofibrosis, bepatitis, arteriosclerosis, cervix, and an autoimmune/inflammatory contracts of the adrenal gland, bladder, bone, because of the adrenal gland, bladder, bankylosing contracts of the adrenal gland, bladder, bankylosing contracts of the certacts, an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human neuron-associated proteins and polynucleotides encoding them, useful for diagnosis, treatment and prevention of cell proliferative disorders including cancer, neuronal and neurological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim

the encoded polypeptides (AAMM8642-AAMM42213) with nootropic, communosuppressant and cytostatic activity. The polynucleotides are useful cof in gene therapy. A composition containing a polypeptide or polynucleotide system, such as peripheral nervous injuries, peripheral nervous common containing a polypeptide or polynucleotide system, such as peripheral nervous injuries, peripheral nervous common containing a polypeptide or polynucleotide system, such as peripheral nervous injuries, peripheral nervous common containing a polypeptide or polynucleotide contained and central nervous system disease, such as Cativing the activity or property containing containing a polypeptide containing containing a polypeptide containing a polypeptide or polynucleotide or polynucleotide containing a polypeptide or polynucleotide containing a polypeptide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polynucleotide or polypeptide or polynucleotide or polypeptide or polypeptide or polynucleotide or polypeptide or polypeptide or polypeptide or polypeptide
Sequence 1066 BP; 225 A; 348 C; 325 G; 168 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 71;

                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-JAN-2000;

AAA75166-68 encode murine TANGO 261 proteins. The specification als describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhes and cell trafficking and/or migration, modulate cellular interactic

modulate

CC that appear in the bone marrow, and leukocytes, treat bone marrow, blood
CC and hematopoietic associated diseases and disorders, atelectasis,
CC asthma and bronchiectasis, intestinal disorders, spleen associated
CC diseases, modulate renal disorders, treat cardiovascular disorders such
CC diseases, modulate renal disorders, treat cardiovascular disorders such
CC as ischemic heart disease, modulate the proliferation, differentiation,
CC cartilage associated diseases or modulate the proliferation, differentiation,
CC cartilage associated diseases or disorder. They may also be used to
CC hydrocephalus, brain herniations, iatrogenic disease, inflammations,
CC bacterial and viral meningitis, Alzheimer's Disease, cerebral
CC hydrocephalus and encephalitis, and treat hepatic disorders,
CC note: the present sequence does not appear in the specification; it was
CC created using information provided.

AAA75166-68 encode murine TANGO 261 proteins. The specification also CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The CC proteins can be used to treat any von Willebrand factor-associated CC proteins can be used to treat any von Willebrand factor-associated CC and cell trafficking and/or migration, modulate cellular adhesion, modulate cellular adhesion, modulate cellular adhesion, modulate cellular adhesion, of cell trafficking and/or migration, modulate cellular adhesion, CC modulate the proliferation, differentiation, and/or function of cells CC and hematopoietic associated diseases and disorders, such as cancer, CC asthma and bronchiectasis, intestinal disorders, atteat bone marrow, blood CC pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial CC astima and bronchiectasis, intestinal disorders, spleen associated CC as ischemic heart disease, modulate the proliferation, differentiation, cCC cartilage associated diseases, modulate the proliferation, differentiation, CC cartilage associated diseases or disorder. They may also be used to hydrocephalus, brain herniations, latrogenic disease, inflammations, CCC bacterial and viral meningitis, Alzheimer's Disease, cerebral codema, and treat hepatic diseases, brain cancers, created using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page -; 175pp; English.
